## DETAILED ACTION

### *Election/Restriction*

1. The newly submitted claims are directed to the following patentably distinct species of the claimed invention:

Species I, drawn to a sample analyzer comprising a controller configured to control the pipette washing unit and the washing solution supplier such that the pipette is washed with the washing solution when the analysis result is less than a predetermined value, and the pipette is washed with the acidic solution when the analysis result is equal to or greater than the predetermined value;

Species II, drawn to a sample analyzer comprising a controller configured to control the pipette washing unit such that the pipette washing unit washes the pipette by suctioning and discharging the acidic solution into and from the pipette;

Species III, drawn to a sample analyzer comprising a controller configured to control the pipette washing unit such that the pipette washing unit washes the pipette by holding the acidic solution within the pipette for a predetermined time;

Species IV, drawn to a sample analyzer comprising a controller configured to control the pipette washing unit and the washing solution supplier such that an inside of the pipette is washed using the acidic solution, and an outside of the pipette is washed using the washing solution;

Species V, drawn to a sample analyzer comprising a controller configured to calculate number of bacteria contained in the sample;

Species VI, drawn to a sample analyzer comprising a controller configured to control the sample preparation unit such that the sample preparation unit prepares the measured sample by diluting the sample with a dilution fluid to form a diluted sample and staining the diluted sample with a stain;

Species VII, drawn to a sample analyzer comprising a controller configured to control the solution supplier such that the solution supplier supplies the acidic solution to the sample preparation unit in order to dilute the sample supplied by the pipette and to the pipette washing unit in order to wash the pipette.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claim 46 is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over

the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
